

VIRUS & MALWARE REMOVAL

System Containment, Cleansing & Protection Protocols

PANEL 1: CORE WORKFLOW

- System Isolation: Disconnecting infected machines from the local network to halt data spreading.
- Deep Environment Scanning: Running boot-level security scans to locate hidden rootkits and Trojans.
- Registry & File Remediation: Safely purging corrupt keys and restoring targeted core operating files.

PANEL 2: SCHEMATIC MAP

PANEL 3: VALIDATION LOG

- ☐ Confirm the threat log shows a fully cleared status clean.
- ☐ Verify system restore points are uncorrupted and fresh.
- ☐ Ensure real-time anti-malware protections are active.
